

Reliable Automatic Sprinkler Co., Inc.
Manufacturer & Distributor of
Fire Protection Equipment

For Immediate Release

Reliable Automatic Sprinkler Co., Inc. introduces Window Protection Sprinklers. Reliable® launches best-in-class Model WP Series Window Protection Sprinklers.

[Liberty, South Carolina, February 2020] Reliable Automatic Sprinkler Co., Inc. announced the introduction of the Model WP Series Window Protection Sprinklers.

The Model WP Series Sprinkler is used with fixed glazed assemblies to create a cULus Listed alternative to a fire-rated wall. The Model WP Series is a 5.6K (80 metric) Fast Response Specific Application Pendent Vertical Sidewall Sprinkler that is Listed to provide complete wetting of various glass surfaces.

“We’re excited about this product introduction,” commented Paul Sasser, Reliable’s Vice President of Engineering. “We were able to achieve an industry-leading Listing of 12 ft (3.7 m) spacing and 15 gpm (57 l/min) minimum flow per sprinkler. That means fewer drops, fewer sprinklers, and less time installing. Combined with its great looks, the Model WP Series provides a cost-effective installation that integrates attractively with architectural glazing.”

The Model WP Series is available with either glass bulb or rugged fusible link operating elements in both ordinary and intermediate temperature ratings. They may be used with heat-strengthened, tempered, or stronger glass windows.

The Model WP Series is available in standard finishes of natural bronze, chrome plated, and white polyester. Special finishes of bright brass, dull chrome, black and custom color polyester are available upon request. The WP56 glass bulb sprinkler is also cULus Listed as corrosion resistant with electroless nickel plating (ENT), white polyester or black polyester finish.

To protect a building exterior from fire originating from an adjacent building, open Model WP Series Window Sprinklers may be used on deluge systems.
